Kofax Kapow for Enterprise Content Migration

Automate the migration of content and data from legacy enterprise content management systems.

Overview

Features

- Migrates content from a wide range of ECM systems into modern ECM systems like Microsoft SharePoint

- Migrates content, versions, and metadata

- Transforms your content automatically to fit any new structure

- Workflow- driven content migration processes with dynamic rules

- Migrates content in bulk processes, at a granular level or phased approach

- Maintains access to your content throughout the entire project

Benefits

- Cut labor costs and reduce traditional migration time by up to 90%
- Avoid content freezing and down-time - zero impact to the business
- Complete projects up to ten times faster

Kapow offers content migration solutions for many enterprise content management systems including:

- EMC Documentum
- Microsoft SharePoint
- OpenText Content Server (OpenText LiveLink)
- FileNet Content Manager
- IBM Content Manager
- Xerox Docushare
- Hummingbird DM
- Oracle Stellent

Many organizations need to migrate enterprise content from one or more legacy enterprise content management systems to eliminate the high costs of maintaining these applications, as well as because IT maintenance resources are often scarce.

Over time, businesses go through mergers and acquisitions or adopt a new enterprise content strategy. When this happens, they face the tasks of centralizing and consolidating information, determining how to eliminate legacy systems, and delivering a common infrastructure for an organization's content and data needs.

Transferring mission-critical content from legacy repositories can be a challenge with "out-of-the-box" migration capabilities with no easy way to assess the relevance of legacy data. These projects can also require a significant amount of technical and business resources—and disruptions often occur as result.

Thankfully, an enterprise content migration project does not need to face these challenges and risks when there are better approaches available.

Automated Enterprise Content Migration

Kofax Kapow™ delivers a repeatable and automated process that inventories and extracts the content, migrates the content according to business rules, and verifies the migration without freezing content. Whereas other custom migration approaches require a significant amount of services that results in multiple iterations, missing content, lengthy content freeze periods, and high cost, Kapow delivers the best possible solution with the least impact on the business.

Inventories and extracts content: extracts content and metadata from multiple repository sources, resolves conflicts, tags content based on classification rules, and loads content and metadata to target source.

Automated migration workflows: all migration operations are simple to define, with point-and-click design. The precision step-by-step extraction processes easily handles analyzing source data, transformation rules, real-time simulation and testing, error display and correction, and more.

Enriches and transforms the metadata: extracts the content and metadata from the source, and connects with other sources (classification and taxonomy servers, databases and Microsoft Excel) to acquire additional document metadata and classification information.

Flexible scheduling of migration: content and data is migrated at a granular or bulk content migration level, empowering administrators to plan migrations so as to not impact the business.

System generated analysis reports: generates pre-processing and post-processing reports to help define content and metadata before it is migrated, and verify the success of the migration.

Benefits

Kapow is ideal for both medium and small-scale ECM migration projects. Many organizations have valuable business content contained in one or more legacy enterprise content management systems that need to be migrated into a modern ECM system like Microsoft SharePoint to eliminate licensing and maintenance cost. Kapow gives organizations a rapid and non-disruptive solution that migrates business-critical content, while retaining permissions, user data and metadata for compliance and corporate governance purposes. With proven migration project experience, the Kapow content migration solution will help avoid costly migration costs and reduce traditional migration time by up to 90%, require minimal or no downtime, and deliver projects faster than relying technical teams to build.

Getting Started

Kapow delivers more than a migration solution, it enables businesses to rethink and reorganize content and data to clean-up content clutter before it's migrated. Kapow has been used by many leading companies to help in the both large and small migration projects.

About Kapow Software

Kapow Software™, a Kofax company, delivers an agile data integration platform that enables organizations to nimbly extract and act on critical information from disparate sources and make it actionable. With its robust and high performance integration engine and intuitive visual design and run-time environments, data integration workflows can be built, deployed, and delivered as lightweight application for business consumers to consume, explore and interact with data results. Data-driven organizations across industries rely on our data integration platform to make smarter decisions, automate processes, and drive efficiencies faster and more affordably.
